Back to The Lab Preventive Maintenance Promotion

There's a lot of catch up to do starting July when you head back into your lab. But after more than 3 months of non-usage, it may be a good idea to get some of your instruments and tools checked. Not only does the electrical circuits on the electrical board needs checking but some unwelcome creepy crawlies may have taken up residence in your instruments and tools too!

Get more from your ppm with Eppendorf by having the additional services below:

- > Check power cables, adapters and wall plugs (in-coming voltage)
- > Check & clean the external including the rear side & the underneath of your instrument
- > Check & clean the internal Electronic Control Boards (ECB)

Don't be surprised if we discovered corpses of insects inside your instruments!

FREE one single - channel pipette calibration voucher when you have 3 or more instruments for ppm. Our pipette calibration facility has received an extension of ISO 17025 accreditation to cover the 6-digit balance. This allows us accredited pipette calibration down to 0.1uL.

TAKE ME HOME!

An Eppendorf Teddy Bear is yours when you take this promotion up now!
