

## Color Change

The new 16/24-channel pipettes Eppendorf Research® plus and Eppendorf Xplorer® plus were given the colour codes pearl white (20 µL) and light yellow (100 µL); this also applies to the epT.I.P.S.® 384 belonging to the 16/24 system.

You have noticed that these color codes are difficult to distinguish. So we changed the color code of all 20 µL pipettes and tips to light pink.

Soon, in the labs there will exist pipettes and tips in light pink as well as pipettes from the first batch in pearl white. As part of our service, we offer to convert 20 µL pipettes sent for service to light pink. This avoids confusion with the appropriate tips, which will be delivered in light pink from November 2019.

Pearl white and light pink are compatible with each other!

Sticker Pull off here!

If you have already purchased new tips in light pink, you can easily use them with the old pipettes in pearl white. If you still have old tips in pearl white, you can of course use them with the new pipettes in light pink.

Research plus, Xplorer plus,  
16/24-channel, 20  $\mu$ L
