What you will learn

Join us for a live pipetting session. See each step up close, ask questions, and get direct feedback from our experts.

Learn how to transfer these techniques to your lab to build confidence, reduce errors, and keep your pipettes performing reliably.

Connect with peers in an interactive session to sharpen your skills. Reserve your spot and let's get started.

What's on the agenda?

- > Pipetting basics and ISO 8655—what matters most
- > Air-cushion vs. direct-displacement systems
- > Key factors for accuracy

- > Mastering technique: angle, depth, speed, pre-rinse
- > Testing, calibration, cleaning and maintenance
- > Live demo: handling and tips for tricky liquids

About your Trainers

Juan José Sosa has 25 years of commercial experience in the life science industry. With a background in Biological Sciences, Biochemistry, and Molecular Biology, he combines technical expertise with customer-focused trainings.

Dr. Barbara Siefker holds a PhD in Biology from the University of Cologne and has been a training specialist with our team for 11 years. She loves helping our customers to master pipetting techniques so they feel confident at the bench.
