Cell type: Primary Keratinocytes

Performance of Eppendorf Cell Culture Consumables (TC treated)

**Procedure:** Human primary epidermal keratinocytes were seeded in appropriate culture medium (KGM-Gold™ BulletKit™). Cell Culture vessels were incubated at 37 °C with a humidified 5 % CO₂ atmosphere. Cell growth and morphology was monitored on day 3, 4 and 5 post-seeding.

Bars represent average count of two wells of an Eppendorf 6-Well Cell Culture Plate

Representative light microscope images (100X magnification)

The tissue culture (TC) treated surface of Eppendorf Cell Culture Consumables allows optimal attachment and homogeneous growth of primary keratinocytes.
