## Certificate of Quality Eppendorf Laboratory Consumables

### STATEMENT ON PER- AND POLYFLUORINATED ALKYL SUBSTANCES (PFAS)

Eppendorf states that the materials and laboratory consumables listed below are safe with respect to Per- and polyfluorinated alkyl substances (PFAS) transmission when used in laboratory applications.

PFAS are industrial chemicals that are used in numerous industrial processes and consumer products due to their special technical properties.

Some PFAS are already considered substances of very high concern (SVHC) under REACH because they are very persistent in the environment, accumulate in organisms and can be harmful to humans. Epidemiological studies have shown effects on the thyroid, immune system and reproduction at very low dose levels.

Eppendorf only works with granulate suppliers who guarantee according to their Absence of Substances List that their raw materials are free of PFAS. Furthermore, no components containing PFAS are used in the manufacture of Eppendorf Consumables.

This certificate applies to the following Eppendorf Laboratory Consumables:
