

# How to Keep Your Electronic Pipette in Good Condition

Maintenance tips

## Battery care

All rechargeable batteries are wear components and their performance decreases with chemical age. Here are some tips to maintain a good battery life:

**Using the pipette for the first time:**  
The full battery capacity will be reached after a few recharging cycles

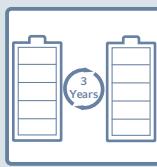

**Using the pipette:**  
Avoid extreme ambient temperatures

**Storing the pipette:**  
We recommend to store the pipette in a charging stand

**Storing the pipette when not in use for more than a month:**  
> Charge fully  
> Unplug the battery  
> Recharge every other month

Replace the battery after three years of use

## Routine pipette maintenance & cleaning by you

Regular (daily) decontamination and cleaning is very similar to mechanical pipettes. The two key watch-outs to keep your electronic pipette in good shape are:

Wipe the pipette with disinfectant – don't spray it

Autoclave lower part only

For more tips and tutorial videos for your Eppendorf Xplorer® pipette visit the »Get Started« section at [www.eppendorf.link/simply-better-pipetting](http://www.eppendorf.link/simply-better-pipetting)

We recommend professional maintenance and calibration by an Eppendorf/authorized service technician at least every 12 months. Learn more at [www.eppendorf.link/pipette-service](http://www.eppendorf.link/pipette-service)
