THE PATH FROM VEGETABLE COOKING OIL TO **EPPENDORF TUBES® BIOBASED AND epT.I.P.S.® BIOBASED**

- > The food oil wastes and residues used to produce the renewable feedstock based polypropylene are traceable to the first collection points
- > The renewable feedstock based polypropylene and all manufacturing steps are sustainability certified by ISCC PLUS a reliable, world-leading certification system. The renewable feedstock content is determined via the ISCC mass balance approach.
- > The resulting materials for the polyolefins used meet the same stric specifications, purity and quality, regardless of whether they are fossil-based or renewable feedstock based recycled raw materials.
