

Save money on a hypoxia incubator from Eppendorf

Your Next Hypoxia Incubator

CellXpert® C170i CO₂ incubator for cell culture under hypoxic conditions

For cell culture applications that require oxygen levels below ambient atmosphere (e.g. in stem cell or cancer research), an incubator with O₂ regulation is needed. These hypoxia incubators reduce the oxygen concentration by supplying significant volumes of (often costly) nitrogen to the chamber, thus suppressing the oxygen. The hypoxia incubator variants of the CellXpert C170i provide (severe) hypoxic conditions, while significantly reducing costs by reduced nitrogen consumption.

Save money with significantly reduced CO₂ and N₂ consumption

- > Smart gas control
- > Accurate door construction (clearance)
- > High-quality seals

Easy cleaning and reliable contamination prevention

- > Seamless chamber
- > Easy disassembly
- > Fanless design
- > 180 °C disinfection
- > Options for small segmented inner doors

For Cell Cultivation Under Hypoxia

Hypoxia incubator models

- > O₂ control option (in-field upgradeable): 1–20 %
- > Fast temperature and gas recovery after door opening to maintain atmosphere including hypoxia
- > Change gas cylinders less often and save money by significantly reduced gas consumption
- > Optional small segmented inner doors to minimize disturbance of hypoxic atmosphere during door openings

Additional features

- > Enhanced vibration and turbulence protection: No fan inside
- > Easy cleaning and disinfection: Seamless chamber, easy disassembling in a few seconds
- > Platinum-coated ZrO₂ (high temperature resistant) O₂ sensor
- > Save lab space: two devices stackable, also with selected incubators from other brands

Nowhere to hide for contaminants and quickly cleaned: Smooth, seamless, and fan-less incubator chamber and removable water tray for proper cleaning and refill

Available with small segmented inner doors to minimize hypoxia disturbance ([read more about the benefits of segmented inner doors in our White Paper](#))
